

RJ Lee Group's Gunshot Residue Lectures Training Where You Want It and When You Need It

The forensic science department of RJ Lee Group (RJLG) now offers a traveling gunshot residue (GSR) lecture. This training has been specifically designed for law enforcement personnel, attorneys and other working professionals who desire a broader base of knowledge in GSR, but don't require the in-depth, hands-on training that our comprehensive workshop provides.*

To organize the session, RJLG staff will coordinate a time and space convenient to the host's schedule and location. Afterward, one of our court qualified experts will work hand-in-hand with the host organization to develop appropriate training content. Our expert will arrive on the scheduled day with their presentation, materials and unique insights ready-to-go. RJLG encourages the host organization to have a lively question and answer period to take full advantage of our experts who are leaders in the analysis and interpretation of GSR. The question and answer period is also an ideal moment to dig for advice and insight about trial preparation. It is our hope that law enforcement professionals and attorneys will both benefit from a deeper understanding of GSR resulting in stronger court cases.

This lecture was designed to specifically address all levels of criminal investigation and prosecution/defense where GSR analysis and understanding is needed. A typical lecture from an RJLG criminal forensic specialist will include:

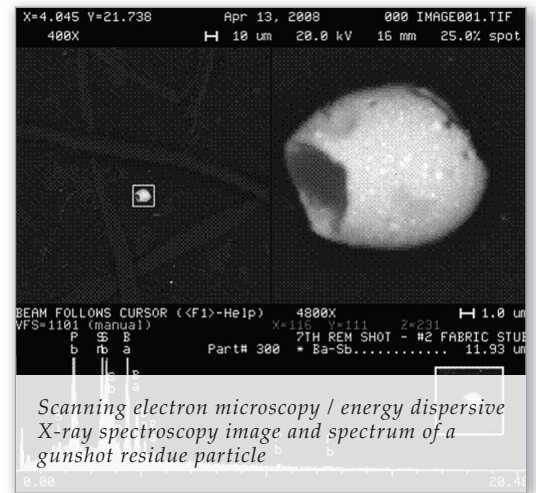

A Brief Synopsis of:

- ▶ GSR as Forensic Evidence
- ▶ Methods of Analysis
- ▶ Scanning Electron Microscopy (SEM)
- ▶ GSR Collection Techniques

A More Detailed Look at:

- ▶ Trial preparation
- ▶ Expert testimony
- ▶ Mock trials

* If you'd like to take a closer look at GSR, contact our forensic science department at the number below and inquire about RJLG's three and a half day, hands-on workshop.
